

# PVDF, Polypropylene, Nylon & HDPE Barb Fittings

Incorporating Silver Ion Technology

Antimicrobially Protected  
Fittings Technology

# Eldon James Antimicrobially Protected AG Fittings

ISO 9001

**Eldon James Flexelene™ Silver** tubing incorporates AgION™ antimicrobial technology to protect tubing against the build up of bio-film. Bio-films can form on surfaces, creating a continuous layer of undesirable polymer slime. The most effective way to prevent biofilm formation is to inhibit initial colonization and proliferation of bacteria. This is the primary mechanism by which AgION™ Antimicrobial combats biofilms.

**Bio efficacy** – Testing of Eldon James Flexelene™ Silver tubing shows that after a flow through of 40,000 liters of tap water, the tubing still provides up to a 6 log reduction in bacteria on the contact surface area of the tubing after inoculation with test bacteria. (99.74% - 99.9999% reduction over a series of 9 test intervals).

**Safety** – The average silver content in tap water run through Flexelene™ Silver tubing was well below 1µg/liter. This means that a person would have to consume nearly 1,000 liters of water in a day, that has flowed through the tubing, to approach the EPA reference dose (adult) 5µg/kg of body weight per day.

## Eldon James Antimicrobially Protected AG fittings

Offer additional protection to a system's flow path. These fittings use the same "built in" silver ion antimicrobial technology as our Flexelene™ Silver tubing.

Kynar®, HDPE, Polypropylene, Nylon AG Fittings

## Antimicrobially Protected AG Fittings and Flexelene™ Silver Tubing

Eldon James antimicrobially protected "single barbed" fittings incorporate natural properties of silver which inhibit the growth of a broad range of microorganisms. Eldon James antimicrobially protected components are designed with AgION™, an EPA recognized silver ion technology, built into the product. As a result, flow path areas within Flexelene™ Silver tubing and all surface areas of Eldon James AG fittings are protected against buildup of bacteria, biofilm, mould, mildew, and fungi that can: degrade product quality, affect taste, and cause odors.

Eldon James AG Fittings deliver "built in" protection to prevent the growth of bacteria, fungi, mold and mildew on the surface of the fittings. Eldon James antimicrobially protected components are not designed to protect the consumer through sanitization, disinfection or elimination of bacteria in the products that flow through them.
