

Cylinders

In the early 1950s, Clippard introduced miniature pneumatic cylinders and valves to the industry. No other manufacturer can match Clippard's level of experience or knowledge of miniature components. Need to replace a cylinder from another manufacturer? Clippard's online Interchange Guide makes it easy—simply search the other manufacturer's part number online at clippard.com and the Interchange will display the most similar Clippard cylinder, along with a full comparison of specifications.

Clippard manufactures a wide variety of special cylinders with custom stroke and rod modifications, special mounting configurations and ports, special seals and lubrication, unique integrated valving, and more. Call **877-245-6247** today to discuss how we can help you optimize your system with the perfect components for your application.

GUIDE

STAINLESS STEEL

- Over 130 different models
- 14 bore sizes
- Superior design and long life
- Thousands of items in stock for same-day shipping

pp. 136-147

ALL STAINLESS STEEL

- Durable 303 and 304 stainless steel
- 4 bore sizes
- FDA compliant grease lubrication
- Wipers standard

pp. 148-151

CORROSION-RESISTANT

- Durable 303 and 304 stainless steel
- FDA compliant grease lubrication
- Wipers standard
- 5 bore sizes

pp. 152-155

COMPACT EXTRUDED

- Interchangeable design allows for quick drop-in replacements
- 7 bore sizes
- Compact design for tight spaces

pp. 156-159

BRASS

- Original miniature cylinder line
- 4 bore sizes
- Robust, heavy-duty design
- Hydraulic or pneumatic

pp. 160-162

AIR VOLUME TANKS

- 10 standard models
- 1 to 16 cubic inches
- Custom sizes available
- Available in stainless, all stainless and polypropylene

p. 163

POSITION SENSORS p. 166

ACCESSORIES p. 164

Many items also available with metric ports.
For more information, visit clippard.com/link/metric

CYLINDERS

AVAILABLE OPTIONS

The following options are available for select Clippard cylinders.

Please note that not all options are available for all cylinders. Consult the charts (pp. 136-162) to see which options are available for a particular cylinder line or model.

CUSHIONS (C, F, R)

Provide adjustment to slow the cylinder near the end of the stroke, reducing impact and prolonging the life of the cylinder. Clippard cylinder cushions feature a captive adjustment that can be adjusted up to a dead stop 1/2" from the end of the stroke.

Read More: p. 134

MAGNETIC PISTON (M)

Equips the cylinder with an internal magnet, allowing it to be used with a reed switch or GMR sensor for accurate positioning.¹

Read More: p. 166

BUMPERS (B)

Reduce noise and shock to the load in applications where the cylinder is cycled with a light load and/or high speeds.¹

Max. Temperature: 200°F

WIPERS (W)

Added to cylinders to prevent contaminants from entering the cylinder assembly system.

Wipers are included standard on the All Stainless Steel line (no need to add a -W suffix to the part number).

FKM SEALS (V)

Used in applications which require special chemical compatibility or more extreme temperatures.

Temperature Range: -20 up to 400°F

ROD THREADS (N)

Various rod thread sizes are available, refer to cylinder charts for specifications. Rods are also available with no threads (N).

SIDE PORTED (S)

Side ported rear heads are sometimes needed when the standard cylinder has the rear port out the back. This option changes the design of the rear head so the rear port is located on the side of the cylinder.¹

HEAVY SPRING (H)

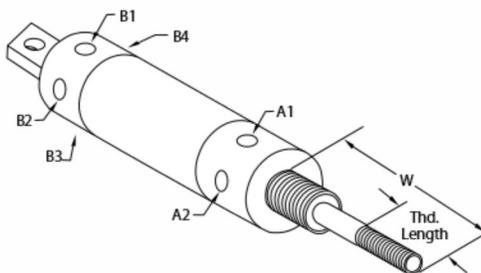

In single-acting, reverse-acting, or spring bias cylinders, this option provides a heavier spring to increase the standard spring force.

Standard and heavy spring forces are listed in Spring Forces Chart, p. 135

ROTATED PORTS (P2-8)

For applications where ports need to be rotated to accommodate specific space requirements or specific port orientation for fittings and tube attachments.

See diagram and chart (right)

Option No.	Rear Port	Front Port
P2	B2	A2
P3	B1	A2
P4	B4	A2
P5	B3	A2
P6	B4	A1
P7	B3	A1
P8	B2	A1

PTFE GREASE (TG)

Seals lubricated with PTFE grease.

METRIC (M-prefix)

Compact Extruded line only.

LARGE ROD (LR)

Available on 1-1/4" bore round body line only.

ROD EXTENSIONS

If a special rod extension is required, refer to drawing above. For extensions on single- or double-acting cylinders, indicate desired "W" when rod is at rest with no pressure to either port. For reverse-acting, indicate "W" when rod is at rest with no pressure to either port.

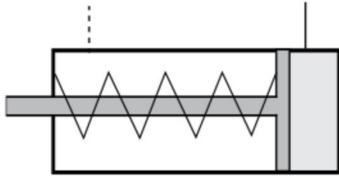

¹Use of this option may add to the overall length of the cylinder.

CYLINDERS

CYLINDER & ROD TYPES

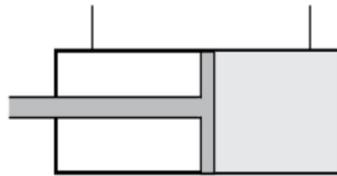

Cylinder Types

Single-Acting (S)

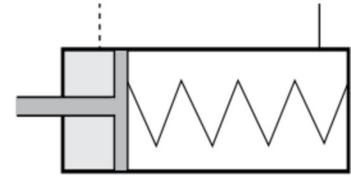

Single-acting cylinders provide power only on the extension ("push") stroke. A separate force—an internal spring—returns the piston to its original position for the next stroke.

Double-Acting (D)

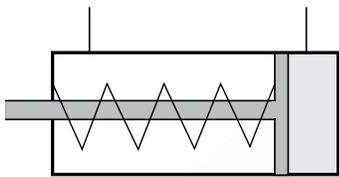

Double-acting cylinders have dual pressure chambers and provide pneumatic power on both extension ("push") and retraction ("pull"), eliminating the need for a spring.

Reverse-Acting (R)

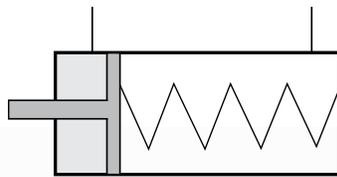

Reverse-acting cylinders are similar to single-acting but with a port on the opposite end to provide power only on the retraction ("pull") stroke.

Front Spring Bias (F)

Front spring bias cylinders are double-acting cylinders with the addition of a spring on the front end. If all air is removed from the cylinder, the front spring bias cylinder will behave like a single-acting cylinder and shift to the retracted position.

Rear Spring Bias (B)

Rear spring bias cylinders are double-acting cylinders with the addition of a spring on the back end. If all air is removed from the cylinder, the rear spring bias cylinder will behave like a reverse-acting cylinder and shift to the extended position.

Rod Types

- **Double-Ended*** (D)
- **Rotating** (R)
- **Non-Rotating** (N)
- **Hollow** (H)

**Double-Acting cylinders only*

Need to replace a cylinder from another manufacturer?

Clippard's online **Interchange Guide** makes it easy to identify Clippard cylinders that are compatible with cylinders from other manufacturers. Just enter your cylinder part number into any search box on the clippard.com website to see a comparison.

clippard.com/link/interchange

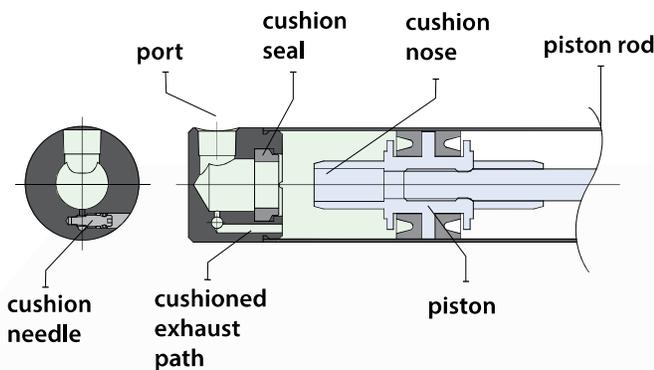

CYLINDERS

CUSHIONS

Pneumatic cushions decelerate the piston and rod assembly at the end of the cylinders travel, reducing internal impact force/noise and enabling faster piston velocities. In fast cycling applications, cushioned cylinders will provide superior life and a better machine environment.

- Easily accessible, stainless steel needle for fine adjustment of cushion
- Long-lasting nitrile cushion seal
- Cushions the last 1/2" of stroke
- Available at front, rear, or both ends of cylinder
- Available with magnetic pistons

Cushions cannot be added to existing cylinders because this option requires additional components and machining. A cushion nose is located on either or both sides of the piston, depending on which cushion option is selected. The heads of a cushioned cylinder have a cushion pocket with a cushion seal. When the cushion nose enters the cushion seal, the air exiting the cylinder is trapped causing it to compress. This provides a resistance force that decelerates the piston.

In this design, a needle valve in the head provides a parallel path for the air to exit and is used to fine-tune the cushion's effectiveness. This needle design has a high flow gain which allows the user to tune the cushion anywhere from little effect to actually stopping the cylinder. The cushion seal collapses when air coming through the adjacent port is introduced, allowing for a fast breakaway.

1-1/16" and 1-1/2" bore cylinders with only one cushion include bumpers on the non-cushioned end

*SDR- models have side ported rear heads

Cushioned cylinders are not designed to decelerate machine members or take the place of shock absorbers in applications with high kinetic energy. Note also that bumpers cannot be used with cushions, but can be used opposite a cushion (as with the 1-1/16" and 1-1/2" bore cylinders).

CYLINDERS

FORCE FACTORS

The chart shown at right can be used to calculate cylinder force. The "force factors" listed indicate the nominal area for the bore and rod sizes shown. To calculate cylinder force, multiply the appropriate extend or retract force factor by the pressure being used. Clippard also recommends adding a 25% safety factor for normal load movement, or 40% for high speed applications.

FORCE FACTOR x **P** (Pressure) = **F** (Force)

F x **1.25** (25% Safety Factor) = **Normal Load Movement**

F x **1.40** (40% Safety Factor) = **High Speed Applications**

To calculate your own force factors:

A (Area) = **Radius**² x **π** (or **Diameter**² x 0.7854)

F = **P** x **A**

Stainless Steel

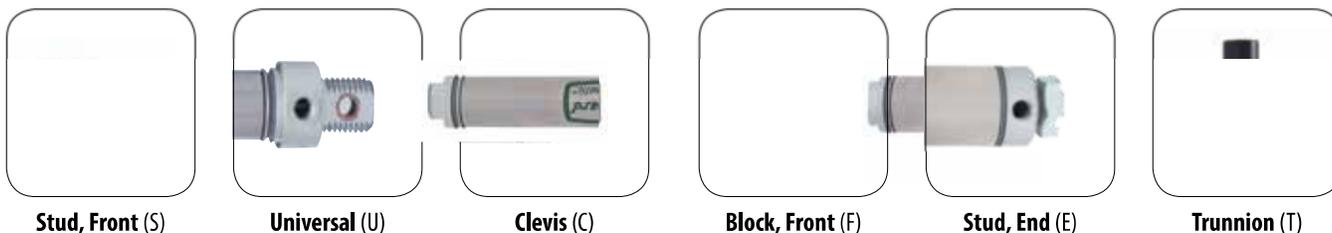

Clippard's stainless steel air cylinders are manufactured to the highest standards of quality and reliability. Featuring a precision rolled body construction, this line is designed for long life, leak-free, low maintenance performance. In addition to quality and performance, Clippard's stainless steel cylinders provide superior design flexibility with a wide range of bore sizes from 5/16" up to 3" as well as a variety of mounting styles. Options available include magnetic pistons and rod wipers.

- High quality, precision rolled construction
- Low maintenance, durable design
- Low breakaway forces provide long life
- Wide variety of interchangeable mounting styles
- Over 130 different models
- Bore sizes from 5/16" up to 3"
- Magnetic pistons available
- Rod wipers available
- Thousands of versions in stock and available for same-day shipping

Bore Size	5/16" up to 3"
Cylinder Type	Single-Acting, Reverse-Acting, Double-Acting, or Spring Bias
Material, Bushing	Bronze
Material, End Caps	Aluminum
Material, Rod	304 Stainless steel
Material, Seal	Nitrile standard, FKM available
Material, Tube	303 Stainless steel
Mounting Style	Universal, stud, trunnion, front block, clevis, or end stud
Pressure, Max.	250 psig
Rod Type	Rotating, non-rotating, or double end
Temperature, Max.	230°F (400°F with FKM)
Temperature, Min.	32°F (-20°F with FKM)

CYLINDERS

Need to replace a cylinder from another manufacturer? No problem.

- 1 Enter your cylinder part number into any search box on the **clippard.com** website.
- 2 The cylinder will appear in your search results, next to the **Interchange Guide** logo.
- 3 The **Interchange Guide** will display compatible Clippard cylinders.

CYLINDERS

Need to replace a cylinder from another manufacturer? No problem.

- 1 Enter your cylinder part number into any search box on the **clippard.com** website.
- 2 The cylinder will appear in your search results, next to the **Interchange Guide** logo.
- 3 The **Interchange Guide** will display compatible Clippard cylinders.

All Stainless Steel

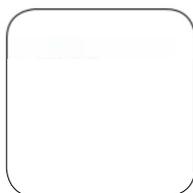

Designed for use in a broad range of applications including those in washdown and caustic environments, these high quality cylinders are constructed of durable 303 and 304 stainless steel. They include a nitrile rod wiper to keep potential contaminants from penetrating inside the cylinder, and are available in bore sizes from 3/4" to 2". Standard stroke lengths are from 1" up to 32" on some models.

- Ideal for harsh, caustic environments
- High quality, precision rolled construction
- Constructed of durable 303 & 304 stainless steel
- Low maintenance, durable design
- Low breakaway forces provide long life
- Wide variety of interchangeable mounting styles
- Bore sizes from 3/4" up to 2"
- Nitrile rod wipers
- FDA compliant grease
- Magnetic pistons available

Bore Size	3/4" up to 2"
Cylinder Type	Double-Acting
Lubrication	FDA compliant grease standard, Magnalube® available
Material, Bushing	FDA compliant Rulon®
Material, End Caps	303 Stainless steel
Material, Rod	303 Stainless steel
Material, Seal	Nitrile standard, FKM available
Material, Tube	304 Stainless steel
Mounting Style	Stud, universal, clevis, or end
Pressure, Max.	250 psig
Rod Type	Rotating or double end
Rod Wipers	Included (nitrile)
Temperature	-20 to 230°F (-20 to 400°F with FKM)

ORDERING INFORMATION

Please Note: Not all possible configurations shown below are available. Please reference the charts on the preceding pages for complete details or visit clippard.com/link/cyl-allss to use our online configurator.

After selecting a cylinder from one of the charts, simply add your **stroke** and **options** to the end of the **base part number** listed in the chart. This will provide the complete part number for your cylinder.

Corrosion-Resistant

This line of corrosion-resistant cylinders provides the same advantages of Clippard's superior quality stainless steel cylinders along with the added benefit of corrosion resistance. Featuring acetal heads with double positive seals, these cylinders are designed for harsh environments requiring frequent use of hot water and chemicals. They are ideal for applications where equipment cleanliness is critical.

- Acetal heads with positive double seals
- Designed for harsh environments requiring frequent use of hot water and chemicals
- High quality, precision rolled construction
- Low maintenance, durable design
- Bore sizes from 5/8" up to 1-1/2"
- Magnetic pistons available
- Ideal for applications where equipment cleanliness is critical
- Aluminum alloy pistons (acetal available)

Bore Size	5/8" up to 1 1/2"
Cylinder Type	Double-Acting
Material, End Caps	Acetal
Material, Rod	303 Stainless steel
Material, Seal	Nitrile standard (FKM available)
Material, Tube	304 Stainless steel
Mounting Style	Stud or universal
Pressure, Max.	150 psig
Rod Type	Rotating or double end
Temperature	32 to 180°F

Compact Extruded

Clippard's line of extruded body cylinders are compact, lightweight, and reliable. The standard, interchangeable design and large variety of mounting styles, bore sizes, and available options make this one of the most versatile cylinder lines in the world. This versatility, in combination with Clippard's superior service, fast delivery, and easy-to-use online cylinder interchange guide, helps prevent down time by enabling quick drop-in replacements.

- Available in 7 bore sizes
- Superior service and quick delivery
- Choose from metric or imperial ports
- Multiple mounting options
- Optional GMR sensor slides into groove for low profile mounting
- Custom strokes welcomed
- Interchangeable design allows for quick, drop-in replacements

Bore Size	12 mm, 16 mm, 20 mm, 25 mm, 32 mm, 40 mm, and 50 mm
Cylinder Type	Double-Acting; Single-Acting, Spring Return; or Reverse-Acting, Spring Extended
Magnetic Piston	Available
Material, Rod	303 Stainless steel, chrome-plated
Material, Seal	Nitrile
Material, Body	Aluminum, clear anodized
Mounting Style	Threaded or thru holes
Pressure, Max.	14 to 145 psig (10 bar)
Rod Type	Rotating or double end
Rod Wipers/Seals	Polyurethane
Standard Stroke	From 1/8" up to 4" (5 to 100 mm)
Temperature	-4° to 158°F

Part Numbering Schematic

Need to replace a cylinder from another manufacturer? No problem.

- 1 Enter your cylinder part number into any search box on the **clippard.com** website.
- 2 The cylinder will appear in your search results, next to the **Interchange Guide** logo.
- 3 The **Interchange Guide** will display compatible Clippard cylinders.

Air Volume Tanks

Air volume tanks are available in standard stainless steel, all stainless steel, or polypropylene. Each air volume tank includes a threaded port at both ends. See the charts below for tank volumes and ports.

Clippard stainless steel air volume tanks are manufactured using the same high quality, precision rolled construction as Clippard's superior stainless steel cylinders. For additional corrosion resistance, air volume tanks with acetal heads are also available.

- Volumes from 1 to 35 in.³
- 11 models
- Easy to connect, mount, and use in circuits

Position Sensors

Clippard stainless steel cylinders that are equipped with a magnetic piston can be used with a **Reed Switch** or **GMR Sensor**. This is an excellent choice for position sensing in pneumatic system control—by accurately sensing the magnetic field of the piston when it passes beneath the sensor, the position of the rod piston is determined, and a feedback signal is created. Some of the benefits of Clippard’s position sensors include: small size, high durability, high sensitivity, high response time, low power consumption and low cost.

To determine which sensor is best suited for your application, refer to the selection chart on the next page.

REED SWITCH

Clippard’s **Reed Switch** is a Single Pole, Single Throw (SPST) Normally-Open electronic switch. When the cylinder’s magnet-equipped piston moves to a location where the magnet is positioned below the Reed Switch, the switch sends a feedback signal to indicate the location of the piston.

A 1/2" minimum stroke is required when multiple sensors are used.

Simple Switch with Wire Leads	RPS-S3
Simple Switch with Quick-Connect	RPS-S8Q

ACCESSORIES

Clippard’s **Universal Mounting Bracket** is designed for use with a Reed Switch or GMR Sensor, on any Clippard Stainless Steel cylinder equipped with a magnetic piston. Hex wrench included.

Universal Mounting Bracket	UC-0848
Mating Cable	CPS-C8Q5

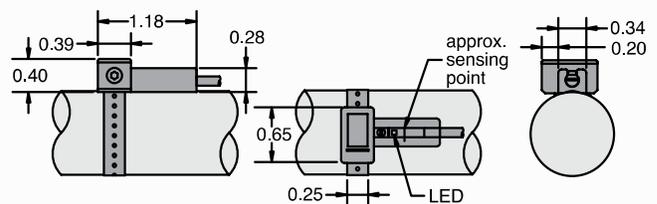

GMR SENSOR

Clippard’s **GMR Sensor** is a solid-state device made up of alternating layers of conductive magnetic and non-magnetic materials. When a magnetic field is applied, there is a large drop in resistance. This decrease produces a signal that can be used to determine the location of the piston.
